

Wheaton Franciscan Healthcare

In Collaboration with Tau Mu Chapter of Sigma Theta Tau International

Title of Activity: **Does the Nursing Admission History Data Really Help? A Tool for Predicting Early Nurse Case Management Referral**

Purpose of Activity: Disseminate research findings on early referral to Nurse Case Management (NCM) services through the applications of nurse and auto-referral in the Electronic Health Record nursing admission history.

Target Audience: Anyone interested in learning more about how the nursing admission history affects case management referral.

Presenter(s): **Maureen T Greene, PhD, RN, ACNP-BC, CNS-BC**

Agenda / Topics:

- Discuss the background literature of discharge planning and the provision of hospital data collection in the EHR admission history
- Discuss the implementation of a decision support change within the electronic health record in July 2008
- Describe patient factors present in the electronic health record nursing admission history used in the study
- List and describe the types of NCM referral
- Describe the research findings of factors that predicted the use of NCM services in the pre and post decision support environment
- Discuss barriers and benefits to the process of admission nursing history completion
- List recommendation for nursing practice, administration, education, and policy change associated with the research findings.

Date Offered: **March 17, 2011**
Time: **1630-2000**

Location: **Wheaton Franciscan Healthcare- St Joseph Campus, Milwaukee, WI-
Room Klieger Auditorium (M101)**
Live Meeting Presentations: Elmbrook-Auditorium, All Saints- Auditorium, St Francis-Felician Room, CMC-Room 2
